

Cervical Screen Form**CDP:EWC – Instruction**

1. Cervical Cancer Screening Performed through Cancer Detection Programs:
Every Woman Counts? Yes No

Pelvic Exam

2. Date of CURRENT Pelvic Exam / / mm/dd/ccyy

3. Rectovaginal exam performed? Yes No

4. Previous Pap Smear Test(s)? Yes No Unknown

5. Date of most recent PREVIOUS Pap smear / / mm / / ccyy Date Unknown

Pap Smear Test

6. Date of Pap Smear Test / / mm/dd/ccyy

7. Specimen Adequacy (Check One)

Satisfactory for evaluation

Unsatisfactory for evaluation **7b**

8. Specimen Type (Check One)

Conventional Smear

Liquid Based (Thin Prep) (not covered)

Other (not covered)

Unknown

9. Pap Smear Results (Check One)

Negative for intraepithelial lesion or malignancy **9a**

Atypical squamous cells of undetermined significance (ASC-US) **9b

* Atypical squamous cells of undetermined significance, cannot exclude HSIL (ASC-H)

**Low grade squamous intraepithelial lesion (LSIL) encompassing: HPV (human papilloma virus), mild dysplasia, and cervical intraepithelial neoplasia (CIN I)

* High grade squamous intraepithelial lesion (HSIL) encompassing: moderate and severe dysplasia, carcinoma in situ, CIN II and CIN III

* Squamous cell carcinoma

* Atypical glandular cells (AGC)

* Atypical glandular cells (AGC), favor neoplastic

* Endocervical adenocarcinoma in situ (AIS)

* Adenocarcinoma

Other (specify) **9k**

10. If Pap Smear Test not performed, why not? (Check one)

Not needed **10a**

Needed but not performed (Includes refused)

Done recently, cervical screening and follow-up services paid with non-CDP funds

Next Step (Planned course of action)

11. Based on CURRENT pelvic exam or Pap smear test results, the next step for this Recipient is: (Check one)

Recipient should return for routine rescreen **11a**

* IMMEDIATE WORK-UP **11b**

Short-term Follow-up **11c

Complete a Cervical Screen form for each routine screening or when patient returns for a planned short-term follow-up visit.

4-5. Determine if the recipient ever received a previous Pap test (avoid selecting Unknown). If "Yes," make every effort to obtain and submit the year of the most recent previous Pap test.

6. Date of Pap Smear Test: Enter the date the Pap test was performed, not the date of the results.

A Pap test always begins a new screening cycle and is reported on a Cervical Screen form.

7b. If specimen adequacy is Unsatisfactory for Evaluation, select Other as the Pap Smear Result (#9), and enter "Unsatisfactory" as the description (#9k). Select Short-Term Follow-up for Next Step (#11), and submit repeat Pap test on a new Cervical Screen form.

9. Pap Smear Results: Look at the final overall assessment which may include the abbreviations shown in parentheses. Ignore any terms used in the description of the lesion. Select only the term used for the final impression. Items marked with [*] and bold font require a Next Step (#11) of Immediate Work-up and submission of a completed Cervical Follow-up form.

9a. Select Negative if result is reactive, infection, inflammation or hyperkeratosis.

9b. Select Atypical Squamous Cells of Undetermined Significance (ASC-US) for results of atypia or atrophic atypia.

9k. Examples of "Other" Pap Smear Results are endometrial cells (for women older than 40), no endocervical component, and Unsatisfactory (if Specimen Adequacy in #7 was Unsatisfactory for Evaluation).

10a. Pap Smear Test may not be needed at this time if the prior Pap test was negative and was done within last 12 months, or it may not be needed per PCP discretion.

11a. Select Routine Rescreen only if both pelvic exam and Pap test were negative for cervical cancer related problems or benign. The current Worksheet is done: submit data online now. **Do not use Cervical Follow-up form.**

11b. Select Immediate Work-up when diagnostic procedures are required without delay to rule out cervical cancer. **Complete the Cervical Follow-up form for these patients.**

11c. Select Short-Term Follow-up when the patient requires follow-up in 3 to 6 months, or a repeat Pap test in less than 12 months. The current Worksheet is done: submit data online now. **Do not use a Cervical Follow-up form.** Start a new Worksheet when patient returns.

* CDP:EWC requires **Immediate Work-up** as the Next Step, and diagnostic procedures for any of the following Pap Smear Results:

- 1) Atypical squamous cells of undetermined significance, cannot rule out HSIL (ASC-H)
- 2) High grade squamous intraepithelial lesion (HSIL) encompassing: moderate and severe dysplasia, carcinoma in situ, CIN II and CIN III
- 3) Squamous cell carcinoma
- 4) Atypical glandular cells (AGC)
- 5) Atypical glandular cells, favor neoplastic
- 6) Endocervical adenocarcinoma in situ (AIS)
- 7) Adenocarcinoma
- 8) Other cervical cancer related problems (per PCP discretion)

Record diagnostic procedures, diagnostic status, and final diagnosis on a Cervical Follow-up form.
